ONE REGION / 20 INDUSTRIES / 24 CONNECTIONS

The paper-to-digital phase transition

Year 2026 | AI pressure A = 0.00 | Digital 0/20 | Mean spin = -1.00 | Minimum energy = -12.65

Newly digital: None this year

Paper: s = -1 Digital: s = +1 Newly digital this year Partners in different states

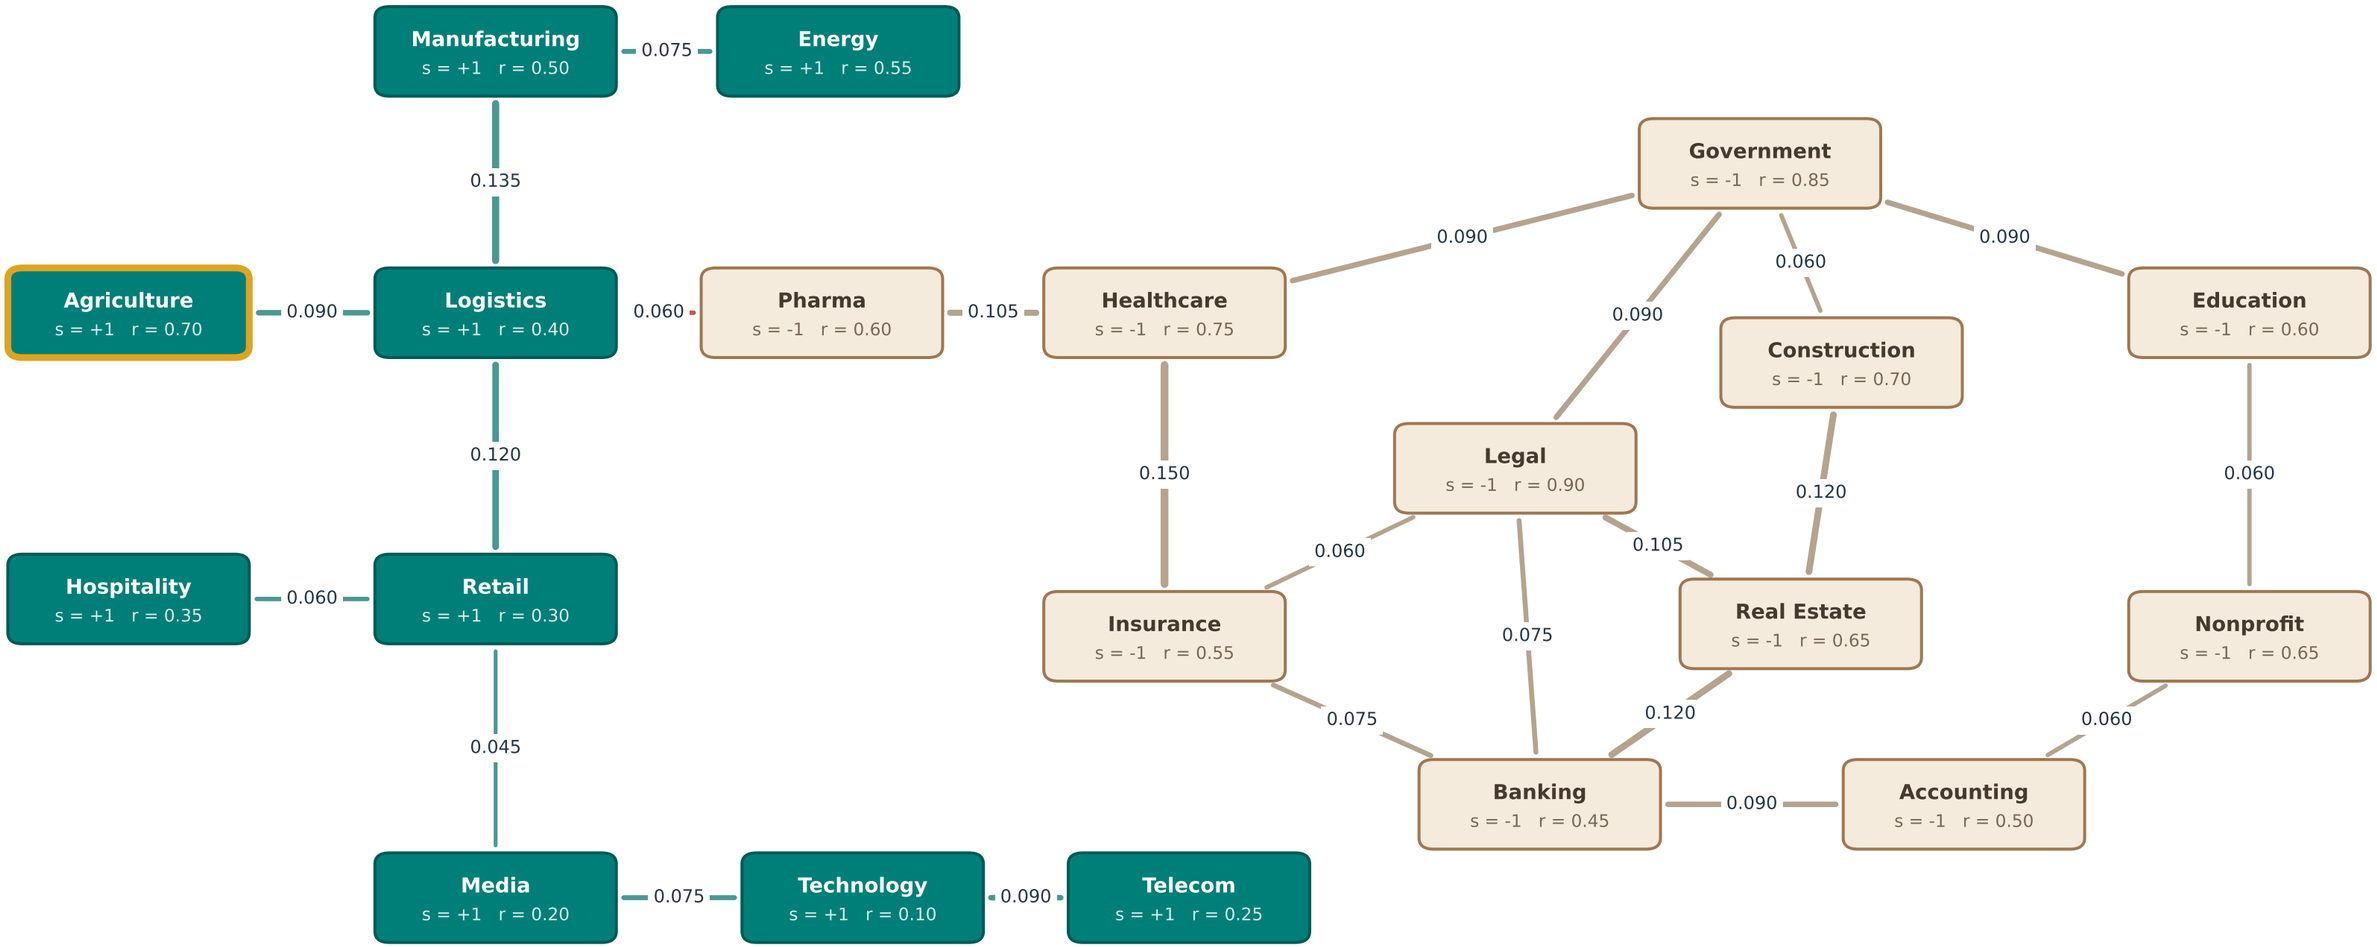

$$E(\mathbf{s}, y) = -\sum_{(i,j)\in\mathcal{E}} J_{ij} s_i s_j - \sum_i [A(y) - r_i] s_i$$

Each frame is that year's exact minimum-energy arrangement. Pressure A(y) = 0.07(y - 2026); mean spin = sum(s_i) / 20. The animation loops back to 2026.

ONE REGION / 20 INDUSTRIES / 24 CONNECTIONS

The paper-to-digital phase transition

Year 2035 | AI pressure A = 0.63 | Digital 9/20 | Mean spin = -0.10 | Minimum energy = -4.57

Newly digital: Agriculture

Paper: s = -1 | Digital: s = +1 | Newly digital this year | Partners in different states

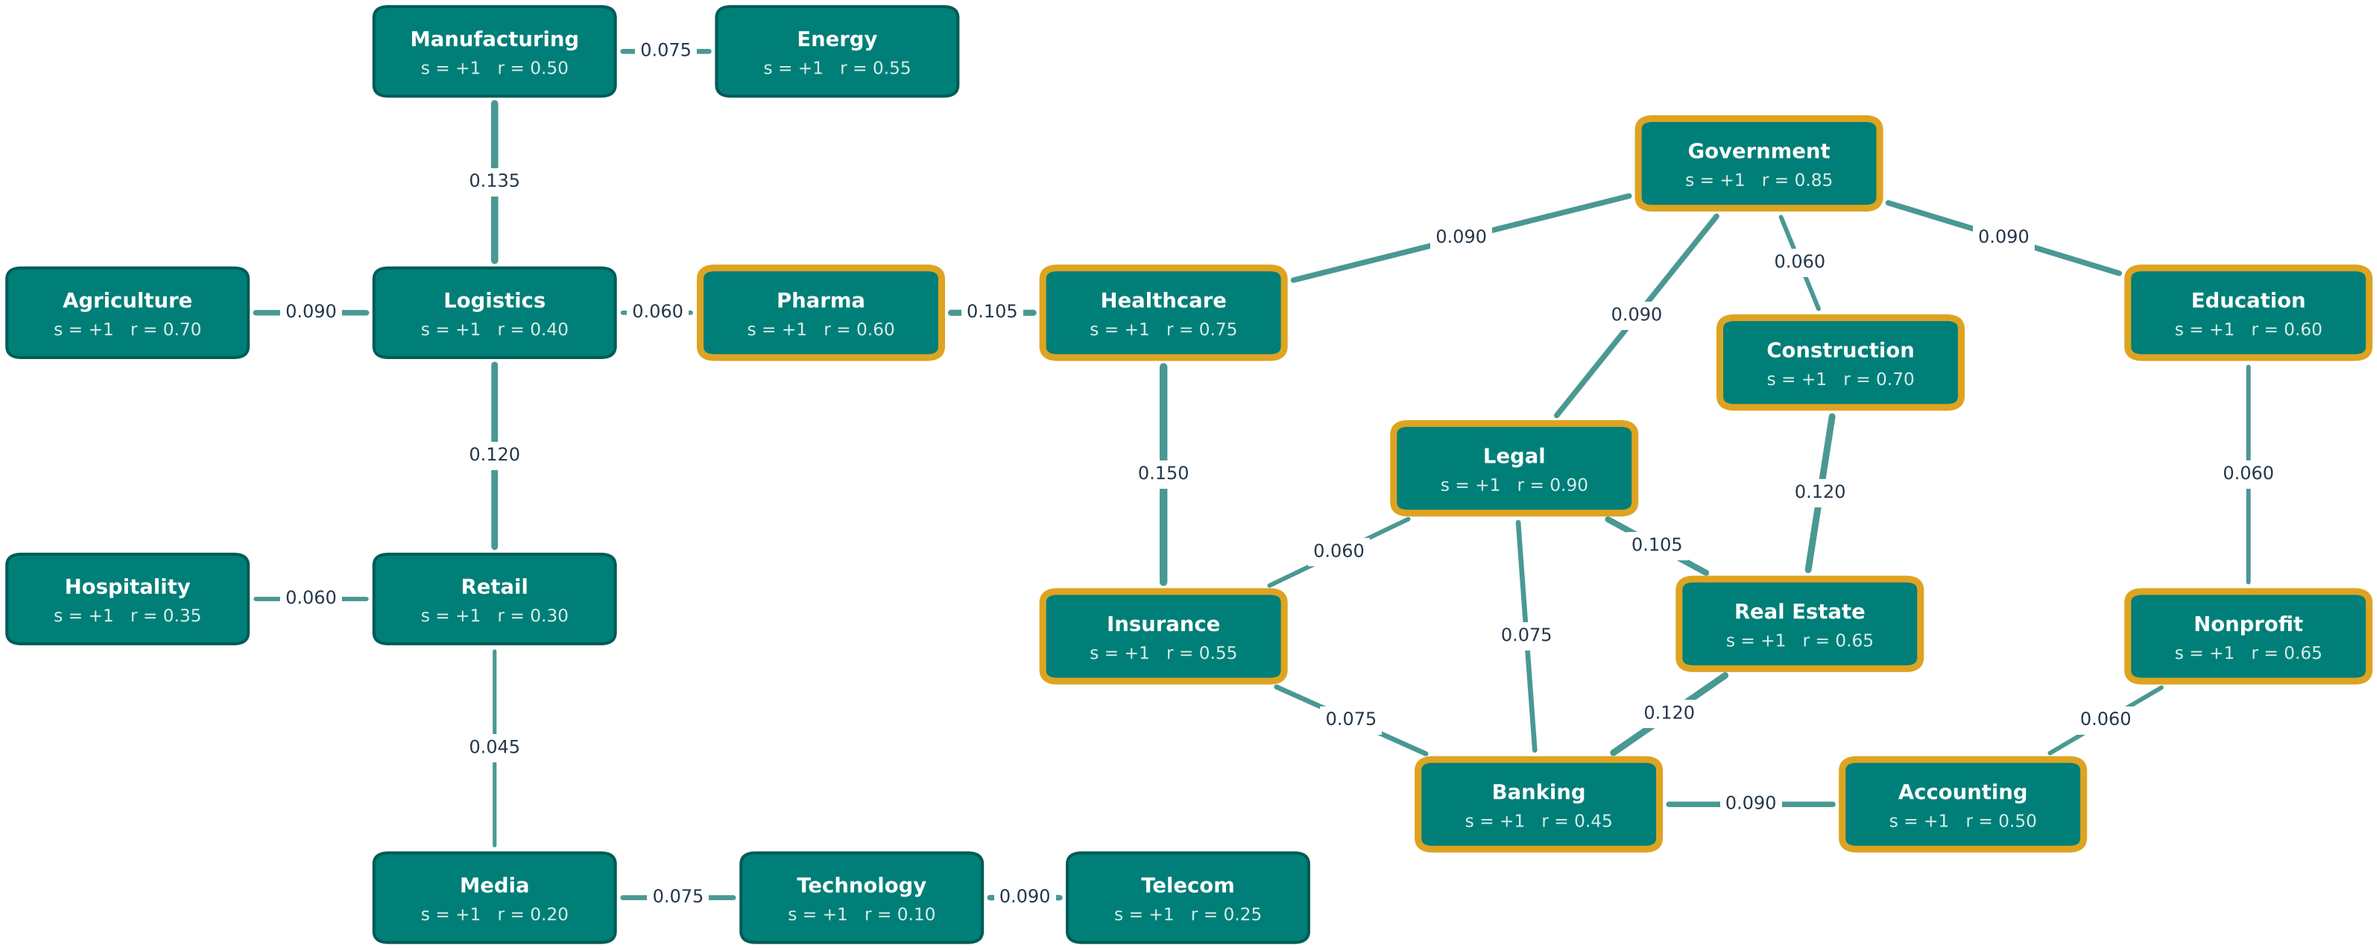

$$E(\mathbf{s}, y) = -\sum_{(i,j)\in\mathcal{E}} J_{ij} s_i s_j - \sum_i [A(y) - r_i] s_i$$

Each frame is that year's exact minimum-energy arrangement. Pressure A(y) = 0.07(y - 2026); mean spin = sum(s_i) / 20. The animation loops back to 2026.

ONE REGION / 20 INDUSTRIES / 24 CONNECTIONS

The paper-to-digital phase transition

Year 2036 | AI pressure A = 0.70 | Digital 20/20 | Mean spin = +1.00 | Minimum energy = -5.55

Newly digital: Banking, Accounting, Insurance, Pharma, Education, Nonprofit, Real Estate, Construction, Healthcare, Government, Legal

Paper: s = -1 | Digital: s = +1 | Newly digital this year | Partners in different states

$$E(\mathbf{s}, y) = -\sum_{(i,j)\in\mathcal{E}} J_{ij} s_i s_j - \sum_i [A(y) - r_i] s_i$$

Each frame is that year's exact minimum-energy arrangement. Pressure A(y) = 0.07(y - 2026); mean spin = sum(s_i) / 20. The animation loops back to 2026.
